*We want to help you get the most out of your Work Van or Work Truck so you can GET THE JOB DONE!!*

CW Mill Equipment Co., Inc. was established in 1969 as an agricultural equipment manufacturer. It was the need for live hydraulics on trucks that in 1986, led us to manufacture hydraulic clutch pump mounting kits.

CW Mill Hydraulic Mounting Kits equip a vehicle with live hydraulics, which means they can have hydraulic pressure anytime the engine is running, regardless of engine RPM's or gear selection.

CW's Mounting Kits can be used for a wide array of applications such as salt spreaders, snow plows, hay bale beds, dump bodies, ground probes, airplane deicers, cranes, wreckers, rollbacks, hydraulic air compressors or tools...

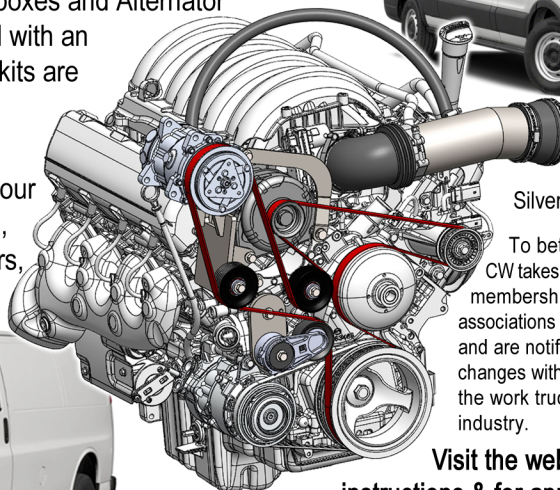

CW Kits fit most ¾ & 1-Ton trucks built after 1985, most gas engine vans & many medium duty trucks.

CW Mill also manufactures Compressor Kits for refrigeration truck boxes and Alternator kits which provide increased battery charging for vehicles equipped with an increased amount of DC electric powered accessories. Generator kits are available for vehicles adding AC power capability for items such as electric power tools but ultimately any AC powered device.

For 35 years, CW Mill has been making it easier for you to mount your aftermarket accessories while offering a wide range of components, including many variations of brackets, pulleys, belts, idlers, tensioners, spacers, & adapters, all to help professionals within the after-market add-on system design industry get the job done.

We continue to come out with new kits & are always working on new designs.

With Precise Fit and Simplified Installation, it has been easy for our customers to continually recommend CW Mounting Kits.

AC Kit shown for 20-22 Chevy/GMC 1500 Silverado/Sierra, 5.3L V8 Gas

To better serve our customers, CW takes an active role in maintaining memberships within these associations so we are aware and are notified of updates & changes within the work truck industry.
