

## INSTALLATION NOTES

---

1. The buyer is responsible for providing trained and experienced installation decision making with technical know-how to apply professional judgment that specifically applies to each individual installation.
2. Be sure to read and understand all available information including but not limited to instructions, warnings, sale terms, and warranties for the vehicle and all system components prior to attempting installation.
3. Disconnect negative battery cable. Drain coolant low enough for top radiator hose removal. Remove air cleaner assembly. Remove air resonator and discard. Install 2" aluminum plug (10) in its place.
4. Remove upper radiator hose. Remove serpentine belt. Remove oil fill tube. Cut tube bracket as shown. Remove power steering pump. The bolts can be discarded. Remove power steering pump OEM bracket. Cut approximately 4-1/2" off hose from power steering reservoir to pump and reinstall. Remove wire harness bracket. The bracket may be discarded.
5. Remove emission tube from valve cover to intake. Install emission hose assembly (11-14). Small hose (11) will be installed at the intake.
6. Install main bracket (1) with mounting hardware (3-4) at locations [A,B]. Install OEM power steering pump with mounting hardware (5). Install oil fill tube to main bracket (1) with hardware (15-16). Install auxiliary A/C compressor with mounting hardware (27-29). Install smooth idler pulley assembly (6-9) to main bracket (1). Install belt (30) – While tensioner is held. Push the smooth idler pulley assembly down and tighten.
7. Install upper radiator hose assembly (17-25). Cut approximately 5" off small bypass hose and reinstall using zip ties (26). Secure to radiator hose and away from any hot or moving parts. Trim any excess zip tie.
8. Install air cleaner assembly. Refill power steering fluid. Refill radiator.

**CAUTION:** Before starting the engine. Check to make certain no wires, hoses, etc. that may have been disturbed during installation do not come in contact with any hot or moving parts. Run the engine and check for proper belt tracking, adjust if necessary.

Disclaimer: (1.) Due to the custom nature and variation of all add-on systems of this type, no complete system kits are offered by the manufacturer, and any group of parts marketed as a kit is limited to only the individually defined parts in that specific kit. The system designer's rotating accessory components are not included, offered, or fully known by the manufacturer. In addition to the absence of the rotating accessory system, other potential components such as additional clamps, brackets, wear liners, hardware, or other items that may be required by the system designer must be identified and supplied by the actual system designer. (2.) Due to vehicle manufacturer's assembly tolerances, production changes, and installation variances, it is the buyer's responsibility to ensure adequate clearance for all components including space for and safe location of the fan, radiator, all lines, and wires. Check for possible movement, vibration, friction points, heat exposure and/or shifting of any and all components such as hoses, wires, and all other components including those that may otherwise be considered non-moving and/or unaffected by the installation (3.) The buyer is responsible for the entire installation of a mounting kit as the mounting kit is part of a custom process controlled by the buyer through their whole system design and directed installer as the installer evaluates, locates, routes, aligns, and tightens all components while determining if additional clamps, brackets, wear-liners, or other components may be required, beyond those included in the kit. Any additional items required, beyond those included in the kit, are to be provided at the expense of the buyer. (4.) The buyer is responsible for the development and communication of their whole system installation procedures, safety precautions, application, and use of the engine accessory mounting kit in their system, including efforts to maintain vehicle control and prevent pinch, wear, impact, and/or burn exposure on all hoses, wires, and other parts. (5.) The buyer is responsible for providing trained and experienced installation decision making with technical know-how to apply professional judgment that specifically applies to each individual installation. The buyers chosen installers must be qualified and experienced technicians that are familiar with the vehicle and accessory being mounted as well as the buyer's whole system design and installation procedures associated with the kit. (6.) The buyer is responsible for determining and achieving compliance to all regulatory issues that apply to the use of all products. (7.) The manufacturer reserves the right to make changes and/or improvements to any product at any time with or without notice.
